

Road Products

With the need to bury electrical and general traffic services, Viscount have a range of polyethylene pits and lids that are UV stabilized and have been designed to support a variety of cable installations for the Road Authorities. The 600mm diameter service pit is approved by VicRoads (Approval 96-H700-01). The 'Square to Round' pit with matching lockable lid provide a secure lightweight combination designed for modern cable junction applications.

Road Products

The smaller detector pits with optional slip resistant lockable lids and the reinforced J3 pit compliment this rugged market segment. Complimenting the Viscount range of infrastructure pits is the new P5-800 pit. This P5 style pit has an increased depth totalling 800mm offering the greater conduit depth without the need for an extension collar. Made from UV stabilised polyethylene the P5-800 pit is both durable and lightweight and is compatible with both the standard P5 lids and the VRM's locking P5 polymer lid.
